TRASK BRITT P.O. BOX 2550 SALT LAKE CITY, UT 84110				MACARTHUR, SYLVIA
		ART UNIT		PAPER NUMBER
				1763

DATE MAILED: 10/19/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	10/715,264	BROWN, NATHAN R.	
	Examiner	Art Unit	
	Sylvia R. MacArthur	1763	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 01 August 2005.
 2a) This action is FINAL. 2b) This action is non-final.
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-14 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
 5) Claim(s) _____ is/are allowed.
 6) Claim(s) 1-14 is/are rejected.
 7) Claim(s) _____ is/are objected to.
 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
 10) The drawing(s) filed on 17 November 2003 is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION***Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-14 rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-21 of U.S. Patent No. 6,899,607 in view of Williams (US 6,594,542).

Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the patent are directed to polishing comprising a plurality of independently moveable pressurization structures and actuators which are configured to bias a corresponding pressurization structure with a selected amount of force. The claims of the present invention are broader than those of the patent such that the patent obviates the claims of the present invention. The patent fails to teach polishing one wafer and using data from that polishing regime to provide a regime for a second wafer.

Williams teaches a method and system for controlling CMP removal.

Col.6 teaches that after the completion of the polishing process, a thickness measurement is taken by metrology device 300. A second wafer is then polished using that data.

The motivation to modify the teachings of the patent al is to enhance the capabilities of the apparatus from the application of pressure to a specific wafer to wafers in an entire lot or batch. The combined teachings of the patent and Williams will increase throughput.

3. Claims 1-31 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-32 of copending Application No. 11/068666. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application are directed to polishing comprising a plurality of independently moveable pressurization elements and a plurality of controllers which are associated to with corresponding pressurization elements with a selected amount of applied pressure. The claims of the present invention are broader than those of the copending application such that the patent obviates the claims of the present invention. The co-pending application fails to teach polishing one wafer and using data from that polishing regime to provide a regime for a second wafer. Williams teaches a method and system for controlling CMP removal.

Col.6 teaches that after the completion of the polishing process, a thickness measurement is taken by metrology device 300. A second wafer is then polished using that data.

The motivation to modify the teachings of the patent al is to enhance the capabilities of the apparatus from the application of pressure to a specific wafer to wafers in an entire lot or batch. The combined teachings of the co-pending and Williams will increase throughput.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

4. Claims 1-31 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-24 of copending Application No. 11/128,144. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application are directed to polishing comprising a plurality of independently moveable pressurization structures and a plurality of actuators which are associated to with corresponding pressurization elements with a selected amount of applied pressure. The claims of the present invention are broader than those of the copending application such that the patent obviates the claims of the present invention. The patent fails to teach polishing one wafer and using data from that polishing regime to provide a regime for a second wafer.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented,

The co-pending application fails to teach polishing one wafer and using data from that polishing regime to provide a regime for a second wafer. Williams teaches a method and system for controlling CMP removal.

Col.6 teaches that after the completion of the polishing process, a thickness measurement is taken by metrology device 300. A second wafer is then polished using that data.

The motivation to modify the teachings of the patent al is to enhance the capabilities of the apparatus from the application of pressure to a specific wafer to wafers in an entire lot

or batch. The combined teachings of the co-pending and Williams will increase throughput.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sommer (US 6,561,871) in view of Williams.

Sommer teaches a linear drive system for CMP.

Re Claims 1, 8, 9: The method of Sommer teaches selectively applying a plurality of different amounts of pressure to different, selected locations of a backside of the semiconductor device structure and a polishing or planarizing at least one layer of the surface of the semiconductor device structure, see col. 15 lines 5-67.

Re Claims 2, 7, 11, 12: The polishing discussed in Sommer is CMP according to the title.

Re Claim 6, 13 and 14: The different amounts of pressure are provided by biasing independently movable pressurization structures, see col. 15 lines 15-20.

Re Claim 10: The selectively applying a plurality of different amounts of pressure and the polishing or planarizing together effect the formation of a substantially planar surface on the semiconductor device structure, see the abstract.

Re Claims 4,5: At least one raised surface has been located and the adequate pressure applied to planarize see col. 16 lines 3-32.

Re Claim 14: The polishing of Sommer comprises forming a substantially planar surface on the semiconductor device structure, see abstract.

Sommer fails to polishing a second semiconductor structure based on the applied pressure of the first.

Williams teaches a method and system for controlling CMP removal.

Col.6 teaches that after the completion of the polishing process, a thickness measurement is taken by metrology device 300. A second wafer is then polished using that data.

The motivation to modify the teachings of Sommer is to enhance the capabilities of the apparatus from the application of pressure to a specific wafer to wafers in an entire lot or batch. The combined teachings of Sommer and Williams will increase throughput.

7. Claims 1-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Chen et al(US 6,436,828) in view of Williams.

Chen et al teaches CMP using magnetic force.

Re Claims 1, 8, 9: The method of Chen et al teaches selectively applying a plurality of different amounts of pressure to different, selected locations of a backside of the semiconductor device structure and a polishing or planarizing at least one layer of the surface of the semiconductor device structure, see col. 6 lines 23-31.

Re Claim 6, 13, and 14: The different amounts of pressure are provided by biasing independently movable pressurization structures (magnetic coils), see abstract and col. 4 lines 45-60.

Re Claims 2,7, 11, 12: The polishing discussed in Chen et al is CMP according to the title.

Re Claim 10: The selectively applying a plurality of different amounts of pressure and the polishing or planarizing together effect the formation of a substantially planar surface on the semiconductor device structure, see the abstract and col. 6 lines 23-31.

Re Claims 4, 5: At least one raised surface has been located and the adequate pressure applied to planarize see col. col. 5 lines 59-67 and col. 6 lines 23-31.

Re Claim 14: The polishing of Chen et al comprises forming a substantially planar surface on the semiconductor device structure, see abstract.

Chen et al fails to polishing a second semiconductor structure based on the applied pressure of the first.

Williams teaches a method and system for controlling CMP removal.

Col.6 teaches that after the completion of the polishing process, a thickness measurement is taken by metrology device 300. A second wafer is then polished using that data.

The motivation to modify the teachings of Chen et al is to enhance the capabilities of the apparatus from the application of pressure to a specific wafer to wafers in an entire lot or batch. The combined teachings of Chen et al and Williams will increase throughput.

Response to Arguments

8. Applicant's arguments, filed 8/1/2005, with respect to the rejection(s) of claim(s) 1-14 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn.

Art Unit: 1763

However, upon further consideration, a new ground(s) of rejection is made in view of Sommer, Chen et al, and above mentioned obviousness type provisional and nonstatutory rejections.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sylvia R. MacArthur whose telephone number is 571-272-1438. The examiner can normally be reached on M-F during the core hours of 9 a.m. and 3 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Parviz Hassanzadeh can be reached on 571-272-1435. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
